

LINEAR POLARIZED PROJECTIONS!

PLACEMENT OF POLARIZING FILTERS

[R] and [L] facing forward toward the screen, taped in front of projector lenses.
([R] is Projectionist's right hand 😊)

- ① Please use a 3D capable SILVER SCREEN... otherwise stereo projections won't work.
- ② Align projector beams to overlap entirely on the screen
- ③ Refer to specific films for timing to synch the AUDIO-
- ④ With RIGHT channel film on Projectionist's RIGHT projector + LEFT channel film on projectionist's LEFT projector - CUE EACH to the COUNTDOWN "2"
- ⑤ (take time to focus during prep - VERY HARD to adjust during show :))
- ⑥ Audience glasses! To be worn with the color stamp on outer Right temple
